

Metropolitan Medical Laboratory, PLC

is your independent,
full-service laboratory
for all of your wellness
needs.

You can choose to have these convenient blood tests to assess your basic health without a doctor's order. We work directly and confidentially only with you.

Some tests require fasting for more accurate results. Please note the fasting requirements before considering these tests.

Payment for tests will be collected when you arrive. Either credit card, or your check will be acceptable.

Your confidential results will be mailed to you within 72 hours. Results will not be sent to anyone else (not your healthcare provider; not your insurance company). Questions about abnormal results should be discussed with your healthcare provider – be sure to bring your results with you.

General Health Testing available at Metropolitan Medical Laboratory, PLC

Direct Access Testing Wellness Profile

Hemoglobin A1c

The American Diabetes Association recommends the use of the A1c as a screening tool for the diagnosis of diabetes.

- No fasting required

Complete Blood Count (CBC)

The CBC is used to evaluate a variety of health conditions including anemia, infections and even leukemia. Your doctor will likely wish to see these results in combination with other tests. It includes 14 separate tests.

- No fasting required

Comprehensive Metabolic Panel (CMP)

A CMP will be used to provide vital information on your kidney function, liver function, electrolytes and fluid balance. It includes 14 separate tests.

- 12 Hours Fasting Required

Cardiac Risk Lipid Profile

Our Cardiac Risk Profile combines tests to analyze your risk of heart disease. It includes a measurement of your cholesterol and triglycerides and ratios of your good (HDL) to bad (LDL) cholesterol.

- 12 Hours Fasting Required

Vitamin D 25-Hydroxy

Vitamin D is used in your body to control calcium and phosphate levels. Vitamin D has been found to not only be important in the health of your bones, but there is increasing evidence that it is important to cardiovascular health, mental health and a host of other medical issues.

- 12 Hours Fasting Recommended

This testing is for those without insurance or a doctor's order.

- No appointment necessary.
- Pay by credit card or check when you arrive.
- Confidential results mailed to you.

More than 35 individual test results are included with these tests:

Additional Tests:

Hepatitis C Antibody

The CDC recommends that Baby Boomers (anyone born from 1945-1965) should get a one-time screening test for the detection of Hepatitis C.

- No fasting required

TSH (Thyroid-Stimulating Hormone)

Screen for, diagnose and monitor thyroid disease.

- No fasting required
- Test should not be run if you are or have recently been ill.

Free T4

FT4 can be used in conjunction with TSH to evaluate thyroid dysfunction. It is recommended as a test to be done following an abnormal TSH.

Blood Type & Rh

ABO Typing: A, B, AB, O
Rh Typing
Rh positive/Rh negative.

Urinalysis

A urinalysis can be used to evaluate various metabolic and kidney disorders. Ten different parameters of the urine are evaluated with this test.

Vitamin B-12

Vitamin B12 is a complex compound which humans obtain exclusively from dietary sources. B12 deficiency can be associated with some anemias as well as unexplained neurological disease.

Men Only

Prostate-Specific Antigen (PSA)

The PSA assay can be an aid in the early detection and management of prostate diseases. This screening can provide valuable results to men over 50 who may be at risk for prostate cancer.

- No fasting required

Testosterone

Testosterone is the major androgen in males. Measurement of serum levels can assist in evaluation of hypogonadal males and monitoring of testosterone replacement therapy. It is not recommended for use in women or children.
